

Quantum HR Workflow Assistant — User Guide

What Is This Tool?

An AI-powered tool for HR professionals in the quantum computing industry. It guides you through a **5-step process** to define, draft, optimize, and plan the execution of a new hire — grounded in a verified database of 3,600+ real quantum job listings.

Getting Started

Create a workflow — Click + in the tab bar, choose an AI model, and click **Create**. The AI automatically introduces Step 1. You can have up to 10 workflows open in parallel.

Add your company website — During Step 1, enter your URL in the bar above the chat and click **Save**. The AI fetches your page description and uses it throughout the conversation.

Choose a model — Use the dropdown in the header:

- **Claude Sonnet 4.6** — default, best quality
- **Claude Haiku 4.5** — faster, lighter

Open the tutorial — Click the  icon in the top-right corner.

The 5 Steps

Step 1 · Define the Hiring Need

The AI asks 1–2 questions per turn to pin down: job title, department, seniority, company context, and hiring goal. Once all five are confirmed, the **Next Step** button activates.

Step 2 · Analyze Job Requirements

The AI produces a requirements table backed by database statistics (e.g. "68% of listings for this role require a PhD"). Requirements are flagged as **standard** (>40% of listings) or **rare** (<10%).

Step 3 · Generate Job Post Draft

The AI first asks 2–3 targeted questions about culture, tone, and benefits — then drafts a structured post with sections: *About the Company* · *Role Overview* · *Key Responsibilities* · *Requirements* · *What We Offer*. No tables in the draft — only professional prose and bullets.

Step 4 · Optimization

The AI optimizes for:

- **LinkedIn** — hook-first structure, character limits
- **D&I** — language audit, bias removal
- **ATS / SEO** — keyword density, title normalization
- **Social media** — 280-character teaser formats

All keyword and title alternatives are backed by database frequency data.

Step 5 · HR Strategy

Every response ends with a **complete, updated roadmap table**:

| Phase | Action | Timeline | Type | Owner | Dependencies |

Type values:  AI-driven ·  Human-driven ·  Hybrid

Click **View Implementation Roadmap** to open the full roadmap popup.

Navigation

Step indicator — Shows all 5 steps. Checkmarks on completed steps, dots on steps with messages. Click any step to review it in read-only mode.

Next Step button — Appears only after the AI signals the current step is complete. Clicking it before that signal shows a warning asking you to confirm.

Quick prompts — Suggestion chips appear above the input box when the AI is idle. On mobile, tap **Suggestions** to open a panel with the same options.

Managing Workflows

Delete — Click the trash icon on the active tab. A confirmation dialog appears; deletion is permanent.

Limit	Value
Workflows per session	10
Messages per workflow	500
Messages per day	150
Messages per minute	30
Max message length	2 000 chars

Tips

- **Be specific.** Concrete detail produces targeted, data-backed output.
- **Add your company URL** in Step 1 to avoid generic phrasing.
- **Answer Step 3 questions** before asking for the draft — this prevents invented details.
- **Push back freely.** Tell the AI when something feels wrong; it will revise.
- **Ask for database comparisons** at any time — frequency stats, title alternatives, and outlier flags are always available.
